Self introduction and
Definition of the "Digital Libraries"

Digital Libraries

2018112801 Koh Dong-Jae

1. Self introduction

Hello, I'm Koh Dong-Jae who studying in the Department of Computer Science at Kyung-pook National University and also majoring in digital information management in the Department of Literature and Information.

My personality is relatively free and I enjoy doing various things and achieving them rather than doing conventional and repetitive things. In order to do what I want and work with people who aim for the same goal, I am going to focus on my current grades at KNU and achieve detailed goals.

After analyzing me like this, I want to enter a development company and work as a web developer. I think processing information and providing it visually is a very attractive job in that it is valuable in that it provides convenience to people, and that it produces results that are as complete as the UI/UX design capabilities are essential. To get a job as such a developer, Currently I am studying React. And I am preparing for the TOEIC test to meet the graduation requirements and improve my specifications.

Also, in the vague future, I want to start a business and lead my business. However, because I lack a lot of knowledge and

experience, I am currently trying to take a lot of start-up courses at school. In this regard, I believe that the experiences I gained as an undergraduate will be of great help. I want to do something that stimulates me. Although I don't know how my situation will change in the future, I think that I'm learning anything every moment.

To talk about my personal life in the future, I am a sports enthusiast, and I think that exercise time is essential during the day. Therefore, the life of a developer who tolerates a flexible lifestyle is very attractive to me. So, I am thinking of going to Gyeonggi-do or Seoul to get a job, and I am aiming to live as a developer and enjoy sports there. I can't always get work-life balance, but that's very important to me, and I know for myself that stress is considerable when this balance is broken and I can't stand it, so I want to live a life where I can get them. I am worried about the future where many things will happen, but I want to enjoy it which will definitely come.

2. Digital Libraries

And I'll write about the definition of a digital library. A digital library is a collection of electronic documents in the form of text, audio, or video. Just as there are more people reading e-books these days, the concept of a digital library seems to be emerging. These digital materials allow modern people who carry electronic devices with them to be portable and transmit and own more than traditional physical materials. In addition, digital libraries can update materials faster and easier than traditional libraries.

However, copyright-related issues, such as illegal downloading and distribution, are the biggest problems at a time when digital libraries are expanding.
